<p>EXPENSE RATIO</p>	<p>Illustration of impact of expense ratio on scheme's returns</p> <p>For any scheme, NAV is computed on a daily basis factoring in all the assets as well as liabilities of the scheme (including expenses charged). Expenses charged to the scheme bring down its NAV and hence the investor's net returns on a corresponding basis.</p> <p>Illustration:</p> <p>If the scheme's gross of expenses NAV goes up by 15% over 1 year (for example from 10 to 11.5), and the expense charged for the scheme over that year is 2% of the initial NAV (0.2), the NAV of scheme (net of expenses) at the end of 1 year will come down to 11.3 (11.5 less 0.2) and therefore the net of expenses return for the investor will be 13%.</p>		
<p>COMPUTATION OF NAV</p>	<p>The Net Asset Value (NAV) of a mutual fund is the price at which units of a mutual fund are bought or sold. It is the market value of the fund after deducting its liabilities. The value of all units of a mutual fund portfolio are calculated on a daily basis, from this all expenses are then subtracted. The result is then divided by the total number of units the resultant value is the NAV. NAV is also sometimes referred to as Net Book Value or book Value.</p> <p>Calculation of NAV Mutual fund assets usually fall under two categories – securities & cash. Securities, here, include both bonds and stocks. Therefore, the total asset value of a fund will include its stocks, cash and bonds at market value. Dividends and interest accrued and liquid assets are also included in total assets. Also, liabilities like money owed to creditors, and other expenses accrued are also included.</p> <p>The Mutual Fund will value its investments according to the valuation norms, as specified in Schedule VIII of the SEBI (MF) Regulations, or such norms as may be specified by SEBI from</p>		

time to time.

Formula to calculate Net Asset Value (NAV) = (Assets – Debts) / (Number of Outstanding units)

Here: Assets = Market value of mutual fund investments + Receivables + Accrued Income
 Debts = Liabilities + Expenses (accrued) the market value of the stocks & debentures.

The NAV shall be calculated up to four decimal places. Separate NAV will be calculated and disclosed for each Option. The NAVs of the Growth Option and the Dividend Option will be different after the declaration of the first dividend.

The AMC will calculate and disclose the first NAV of the Scheme within a period of 5 business days from the date of allotment. Subsequently, the NAVs will be calculated for all the Business Days.

Rounding off policy for NAV:

For this Scheme, NAV will be declared upto four decimal places.

However, there can be no assurance that the investment objective of the scheme will be achieved.

Sale Price:

Sale price is a price at which the fund house sells / offers mutual fund units to investors; this is nothing but the NAV of the respective Scheme of Mutual Fund. For investor who wants to invest in Mutual Fund, the units are offered at NAV of the respective Scheme of Mutual Fund.

For Example – If investor A wants to invest Rs. 5,000/- in XYZ Scheme of Mutual Fund. The NAV of Mutual Fund Scheme XYZ is Rs. 15 per unit. Investor’s Investments & Mutual Fund unit allocation in Scheme XYZ is calculated as follows:-

$$\begin{aligned} \text{Investment of Investor A} &= \text{Investment Amount} / \text{Sale Price} \\ &= 5,000 / 15 \\ &= 333.3333 \text{ units} \end{aligned}$$

This means investor A will be allocated **333.3333 units** of Mutual Fund Scheme XYZ.

Repurchase Price:

Repurchase price is a price at which fund house repurchases the mutual fund units back from the investor. For investor who wants to redeem his mutual fund units, the units are repurchased at respective scheme NAV less Exit Load (If Applicable)

For Example - If Mutual Fund Scheme XYZ is having NAV of Rs. 15 & Exit Load of 1% then the repurchase price would be calculated as follow:

$$\begin{aligned} \text{Repurchase Price} &= \text{NAV} * (1 - \text{Exit Load} \%) \\ &= 15 * (1 - 0.01) \\ &= 14.8500 \end{aligned}$$

This means the investor will realise **Rs. 14.8500** per unit if he redeems from Mutual Fund Scheme XYZ.

In case of no exit load the NAV & repurchase price are same.
