<p>Investment Strategy</p>	<p>The Indiabulls NIFTY50 Exchange Traded Fund will be managed passively with investments in stocks in a proportion that match as close as possible to the weights of these stocks in Nifty 50 Index. The AMC uses a “passive” or indexing approach to try and achieve the Scheme’s investment objective. Unlike other Funds, the Scheme does not try to “beat” the markets it tracks and does not seek temporary defensive positions when markets decline or appear overvalued. The AMC does not make any judgments about the investment merit of a particular stock or a particular industry segment or the underlying nor will it attempt to apply any economic, financial or market analysis. Indexing eliminates active management risks with regard to over/ underperformance vis-à-vis a benchmark.</p> <p>Since the scheme is an exchange traded fund, the scheme will only invest in the security constituting the underlying index. However, Due to corporate action in companies comprising of the index, the scheme may be allocated/allotted securities which are not part of the index. The scheme may hold upto 5% of their total assets in stocks not included in the corresponding Underlying Index. For example, the AMC may invest in stocks not included in the relevant Underlying Index in order to reflect various corporate actions (such as mergers) and other changes in the relevant Underlying Index (such as reconstitutions, additions, deletions and these holdings will be in anticipation and in the direction of impending changes in the underlying index). COMPUTATION OF NAV

The Net Asset Value (NAV) of a mutual fund is the price at which units of a mutual fund are bought or sold. It is the market value of the fund after deducting its liabilities. The value of all units of a mutual fund portfolio are calculated on a daily basis, from this all expenses are then subtracted. The result is then divided by the total number of units the resultant value is the NAV. NAV is also sometimes referred to as Net Book Value or book Value.

Calculation of NAV Mutual fund assets usually fall under two categories – securities & cash. Securities, here, include both bonds and stocks. Therefore, the total asset value of a fund will include its stocks, cash and bonds at market value. Dividends and interest accrued and liquid assets are also included in total assets. Also, liabilities like money owed to creditors, and other expenses accrued are also included.

The Mutual Fund will value its investments according to the valuation norms, as specified in Schedule VIII of the SEBI (MF) Regulations, or such norms as may be specified by SEBI from time to time.

Formula to calculate Net Asset Value (NAV) = (Assets – Debts) / (Number of Outstanding units)

Here: Assets = Market value of mutual fund investments + Receivables + Accrued Income

Debts = Liabilities + Expenses (accrued) the market value of the stocks & debentures.

The NAV shall be calculated up to four decimal places. However the AMC reserves the right to declare the NAVs up to additional decimal places as it deems appropriate. Separate NAV will be calculated and disclosed for each Plan/Option. The NAVs of the Growth Option and the Dividend Option will be different after the declaration of the first Dividend.

The AMC will calculate and disclose the first NAV of the Scheme within a period of 5 business days from the date of allotment. Subsequently, the NAVs will be calculated for all the Business Days.

Rounding off policy for NAV:

To ensure uniformity, the Mutual Fund shall round off NAVs up to four decimal places & the fourth decimal will be rounded off to the next higher digit if the fifth decimal is or more than 5 i.e., if the NAV is 10.13576 it will be rounded off to 10.1358.

However, there can be no assurance that the investment objective of the scheme will be achieved.

Sale Price:

Sale price is a price at which the fund house sells / offers mutual fund units to investors; this is nothing but the NAV of the respective Scheme of Mutual Fund. For investor who wants to invest in Mutual Fund, the units are offered at NAV of the respective Scheme of Mutual Fund.

For Example – If investor A wants to invest Rs. 5,000/- in XYZ Scheme of Mutual Fund. The NAV of Mutual Fund Scheme XYZ is Rs. 15 per unit. Investor's Investments & Mutual Fund unit allocation in Scheme XYZ is calculated as follows:-

$$\begin{aligned}\text{Investment of Investor A} &= \text{Investment Amount} / \text{Sale Price} \\ &= 5,000 / 15 \\ &= 333.333 \text{ units}\end{aligned}$$

This means investor A will be allocated **333.333 units** of Mutual Fund Scheme XYZ.

Repurchase Price:

Repurchase price is a price at which fund house repurchases the mutual fund units back from the investor. For investor who wants to redeem his mutual fund units, the units are repurchased at respective scheme NAV less Exit Load (If Applicable)

For Example - If Mutual Fund Scheme XYZ is having NAV of Rs. 15 & Exit Load of 1% then the repurchase price would be calculated as follow:

$$\begin{aligned}\text{Repurchase Price} &= \text{NAV} * (1 - \text{Exit Load \%}) \\ &= 15 * (1 - 0.01) \\ &= 14.850\end{aligned}$$

This means the investor will realise **Rs. 14.850** per unit if he redeems from Mutual Fund Scheme XYZ.

In case of no exit load the NAV & repurchase price are same.

3. GST on brokerage and transaction cost paid for asset purchases, if any, shall be charged within the limit prescribed under Regulation 52 of the SEBI Regulations.

Illustration of impact of expense ratio on scheme's returns

For any scheme, NAV is computed on a daily basis factoring in all the assets as well as liabilities of the scheme (including expenses charged). Expenses charged to the scheme bring down its NAV and hence the investor's net returns on a corresponding basis.

Illustration:

If the scheme's gross of expenses NAV goes up by 15% over 1 year (for example from 10 to 11.5), and the expense charged for the scheme over that year is 2% of the initial NAV (0.2), the NAV of scheme (net of expenses) at the end of 1 year will come down to 11.3 (11.5 less 0.2) and therefore the net of expenses return for the investor will be 13%.

C. LOAD STRUCTURE

This amount is used by the AMC to pay commissions to the distributors and to take care of other marketing and selling expenses. Load amounts are variable and are subject to change from time to time.
